Mission

We strive to provide optimum solutions for medical facilities by the integration of healthcare products, medical devices, information and related technology into total systems, always aware of our social responsibility.

Origin of the company name

We are dedicate to developing medical systems, by constant innovation.

INNOMEDICS

Innovative Medical Company with System Integration Technology

We specialize in providing system solutions for medical facilities.

Mission

Improvements of Quality of Life is one of the most important tasks for the extension of "healthy life expectancy".

Healthcare providers are facing various challenges as to how to attain medical innovation through the significant investments for early disease detection and early treatment.

We, at Innomedics play a key role in providing cost effective medical instruments and services. Since inauguration, we have been maintaining "Organizing Medical instruments as System" as our corporate principle, which results in synergy among medical instruments. Our ability to design the optimal medical system is our core corporate value proposition.

Actively collecting information on medical & technological advancements, our professionals continue to develop "literacy", which enables innovative proposals for our customers.

Capitalizing on my extensive healthcare business experiences in Japan and abroad, I am committed to develop our employees with an aim to earn "the company of choice" status among our valuable customers.

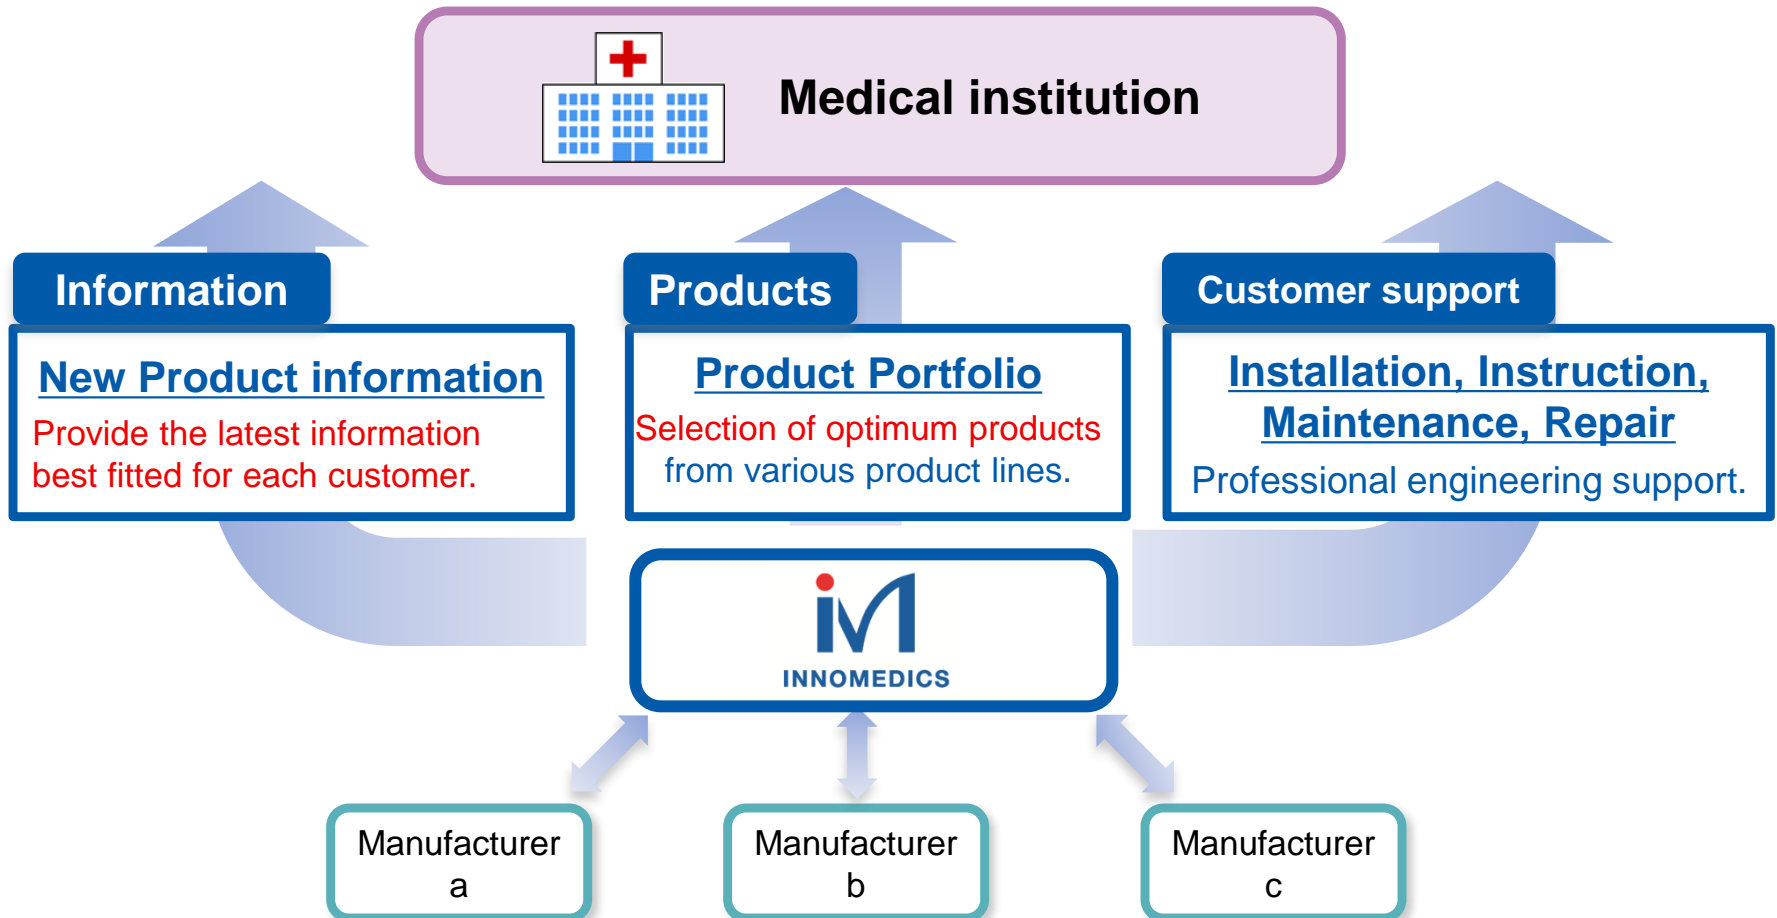

In the future, it is anticipated that AI & Robotics unification will enhance medical processes, such as diagnosis, treatment and aftercare. Throughout the process, we will be capable of providing medical strategy support & consultation.

We would like to contribute to the extension of "healthy life expectancy" and beyond as a viable partner offering comprehensive healthcare solutions with depth of knowledge of medical information and technologies.

PROVIDING TOTAL SOLUTIONS: PRODUCTS, INFORMATION AND SUPPORT

Vision

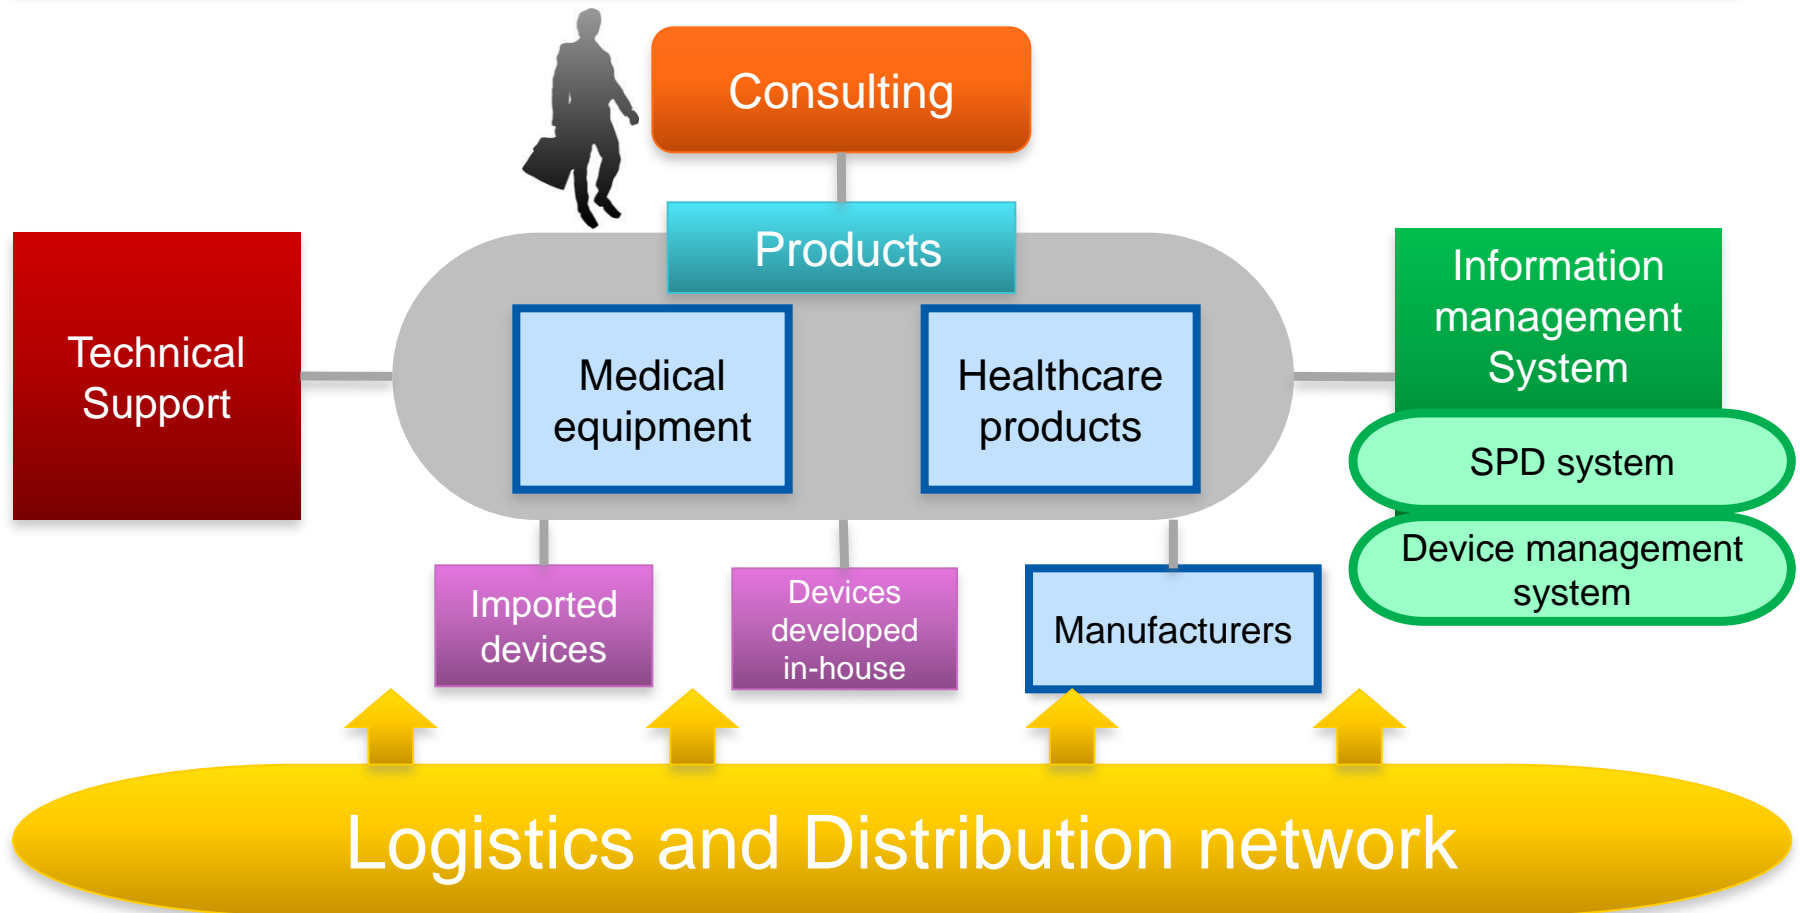

The key to success is understanding the needs of the healthcare setting and analyze the associated problems, challenges and limitations. Then, based on that understanding, to quickly and smoothly provide the necessary products and flow of information”.

SYSTEMATIC APPROACH TO CREATING SOLUTIONS FOR PROBLEMS AND CHALLENGES

Solution

Whatever the needs, a systematic approach, based on blending the most advanced devices with information management systems can delivery a cost effective solution.

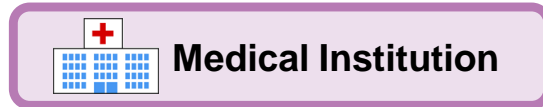

VALUE-ADDED OVERALL CONSULTING PACKAGE

Advantage

Understanding the needs and drawing upon our experience and expertise to find the “best match” solution for each medical facility.

Our system is geared toward combining products and technologies that can work effectively and optimally in a variety of healthcare settings. We consult on total medical systems covering the total spectrum of clinical needs
